

Reporting Solutions for Microsoft® SQL Server 7.0

Our reporting solutions for
Microsoft SQL Server 7.0 include:

- Fully scalable business intelligence solutions for most Microsoft products
- Reporting capabilities and the ability to connect to a SQL Database any way you want
- Integrated desktop technologies for ad hoc query, multi-dimensional data analysis (OLAP) and reporting for your SQL Server data

Get More Value from Your Data Warehouse

Seagate Software delivers information, not complexity. We provide a set of integrated solutions to help you access, analyze, report and share business-critical information. As a member of the Microsoft Data Warehousing Alliance, our suite of reporting solutions help you get more value from your data warehouse through technologies for query and reporting, OLAP, statistical analysis, forecasting, and data mining.

Looking to implement a proven business intelligence infrastructure today that integrates with Microsoft SQL Server 7.0? Do you need a solution that scales to thousands of people? Would you like to provide reporting and connect to a SQL database any way you want? Seagate Software delivers reporting solutions for Microsoft SQL Server 7.0 that will help you get more value from your data warehouse.

All the Basics of Business Intelligence—FREE

Seagate Analysis™ delivers all the basics of business intelligence and is available for free at www.fetchseagate.com. It provides integrated desktop technologies for ad hoc query, multi-dimensional data analysis (OLAP), reporting, and all with export capabilities to Microsoft

Excel. Seagate Analysis is designed to access and analyze any ODBC data source.

A Powerful Suite of Business Intelligence Tools

Because price and hype shouldn't get in your way of easily identifying, evaluating and obtaining reporting tools to meet your needs, get 50 FREE licenses of Seagate Info 7 at www.fetchseagate.com.

Seagate Info™ is a complete, integrated business intelligence suite with reporting, query, and Open OLAP analysis capabilities. From slicing and dicing OLAP data to intuitive ad hoc query to robust enterprise reporting, Seagate Info delivers a powerful suite of easy-to-use business intelligence (BI) tools that incorporate the broadest range of functionality across the spectrum of BI solutions. It also offers a seamless interface with the Web, ensuring diverse users and business partners have information at their fingertips, from anywhere in the world.

Seagate Info supports OLE DB and SQL Server OLAP Services, and seamlessly connects to Microsoft SQL Server 7.0. It's the only fully scalable BI solution for Microsoft SQL Server 7.0 users, from enterprise report viewing to ad hoc query to OLAP

analysis and business modeling. A trusted and proven solution, Seagate Info easily scales to hundreds of thousands of users across the enterprise. We understand your business challenges and deliver the people-minded vision and technology to help you meet the diverse needs and skill sets of your users.

Build Custom Applications

Seagate Holos™ is a proven and reliable applications development environment for building custom BI applications for multi-dimensional analysis, statistical analysis, forecasting, and data mining. Its applications help organizations fulfill specific business needs, including how to better manage large volumes of data. Relevant and actionable information is presented to users in ways that mirror their thought and

business processes, and can be precisely tailored to the whole spectrum of users with diverse needs and requirements.

Seagate Holos works seamlessly with Microsoft SQL Server 7.0 and provides developers with powerful tools to develop custom BI applications. Seagate Holos' Open OLAP technology allows business users to analyze and use corporate data without any barriers arising from where and how data is physically stored. Open OLAP technology allows SQL Server customers to link the data in their SQL Server data warehouses and data marts to relational, OLAP, and ERP databases. Seagate Holos can combine all these disparate database sources in a single application, making it easy to integrate with SQL Server 7.0.

World Standard Desktop Reporting

The integrated reporting features of Seagate Crystal Reports™ are powerful tools for Microsoft SQL

Server 7.0. Visual Basic developers can quickly create, view and modify presentation-quality reports from directly within their Visual Basic Integrated Design Environment. To report on a SQL Database, connect any way you want to: through a SQL OLE DB provider, through ODBC, or through an ADO record set to a report at run-time.

Seagate Crystal Reports also leverages the power of your Intranet for easy report access by all users, regardless of platform or location. Thin-wire architecture minimizes download time and network traffic.

Access. Analyze. Report. Share.™
